

# Linear Regression

## □ Example :

Animal	Predictor variable (x)	Target variable (Zielgröße) y
	Breast Circumference (in cm)	Body Weight (kg)
1	176	471 = $y_1$
2	177	463
...	...	...
10	184	541

- Any relationship between x and y?
- Descriptive
